

COMENIUS

What can we do?

- Reforestation, recycling paper, using less paper, environmental education, volunteering.
- Prevention of forest fire, planting new trees, educating people about the importance and benefits of forest.
- Giving stricter fines to people who damage the forests.
- Introducing“clean technologies” and restructuring of stands into mixed systems containing different species of broadleaf trees which are pollution - resistant.
- Reforestation with rapids *latifoglie* (grassy or woody plants with wide leaves) growth to defend the ground.
- Band firebreak to prevent the fires.
- Care of the already existing woods.
- Creation of artificial harvests of water next to the woods.
- We must work in programs like our “hand in hand for the environment protection”

In the future our students will vote and those votes will be able to force new affective laws to protect nature.
